

PercStick — Mobile Touch Gesture Quick Reference

For the Live Depth Graph and Live Rate Graph on a phone or tablet · v2.2

The graph has two zones

■ **Edge strip** (~0.5" either side) — always scrolls the page, any swipe direction

■ **Center** — responds to scrub, drag-pan, and pinch-zoom

Gestures

What you do	Where	What happens
Swipe up/down or left/right	Edge strip	Scrolls the page — same as anywhere else
Touch and hold, then slide left/right	Center	Scrub — shows a crosshair with the exact value/time at that point. Doesn't move the view.
Quick drag, any direction	Center	Pan — left/right moves through time, up/down shifts the value axis; a diagonal drag does both at once.
Pinch two fingers together or apart	Anywhere on the graph	Zoom the time axis — works at any pinch angle.

Toolbar buttons

Always reliable — use these with gloves, wet hands, or in bright sun.

Button	Does
X- / X+	Zoom the time axis out / in
Live	Snap back to live, following the newest data
Last: 5 / 15 / 30 / 60 min	Jump to a fixed recent time window
Y- / Y+ (per graph)	Zoom that graph's value axis out / in, centered on what's currently showing
Y Auto (per graph)	Reset that graph's value axis back to auto-fit
5 min checkbox (Rate Graph)	Shows or hides the 5-minute rate curve on the Rate Graph

Tips

- If you zoom in tight on a graph and the reading drifts near the edge of what's visible, drag in the **center** to re-center it, or tap **Y Auto** to reset.
- When in doubt, use the edge strip to scroll and the toolbar buttons to adjust the view — gestures in the center are a shortcut, not the only way to do anything here.
